WhiteSpace Cloud

As a healthcare leader, you are challenged to make crucial business decisions on a daily basis. These are based upon your understanding of the constantly evolving ecosystem within which your organization operates. But that understanding can only be achieved when you have ready access to the right information – rich, insight-filled data, gathered at the right time and visually displayed in ways that work for you. Access must be where you are, on any tool you may be using, at any hour of the day.

WhiteSpace Health understands this. We work with healthcare providers of all sizes to deliver ACTIONABLE insights in mobile-compatible formats that improve operational performance, drive revenue and dramatically enhance the patient experience.

- **CONNECT ALL YOUR DATA SOURCES**

from disparate systems such as EHR, patient portals, call systems, billing systems and others.

- **LEVERAGE DIAGNOSTIC BUSINESS INTELLIGENCE**

to provide metrics at individual, physician levels and to support staff to help take the right actions.

- **ANALYZE UNSTRUCTURED DATA**

along with structured data and convert into meaningful insights and use.

- **USE ADVANCED NATURAL LANGUAGE PROCESSING**

combined with human intelligence, in our intuitive algorithm to deliver impactful, cutting-edge analytics.

Uncover the potential of your data to form actionable insights and help you make decisions with confidence.

- **ENGAGEMENT**

Measure your patient communication and engagement trends and use those insights to improve the experience, increase patient portal adoption, reduce cost and measure meaningful use.

- **SENTIMENT**

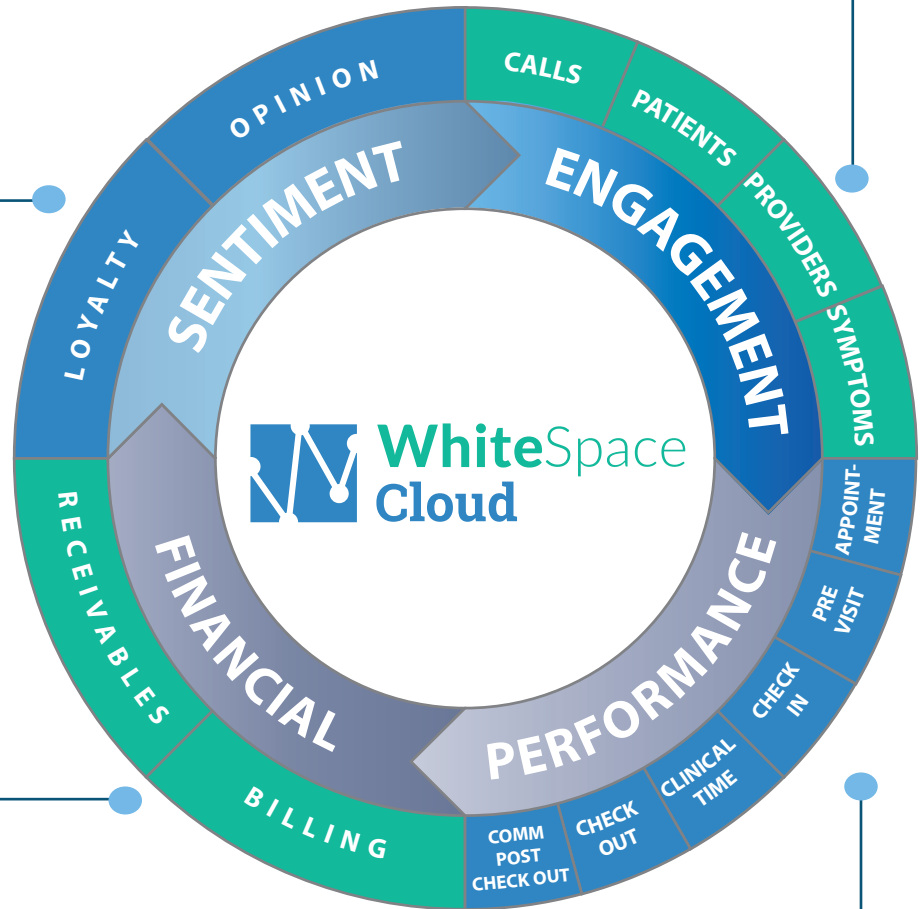

Deploy CAHPS and custom surveys to obtain the necessary feedback to improve processes and services, plan training requirements, investment and hiring strategy and support employee appraisals. Evaluate social data from relevant online sources such as blogs, forums, reviews and social networks to discover meaningful insights.

- **FINANCIAL**

Drive key revenue and cost optimization metrics through better transparency – using real-time data to understand key financial indicators such as claim denial rates, denial reasons, payer performance compliance and claim types.

- **PERFORMANCE**

Monitor performance metrics and operational processes, then evaluate trends to make right decisions with confidence.
